Machine Learning assignment 1

Prerequisites

You need to install Python 3 (at least), I don't garranty that it works on Python version 2. If you didn't have python installed already you can follow this link to install Python.

To run the python script in the a docker environment you obviously need to install docker, here.

If you're using Fedora 31, I recommend you to follow this blog for the installation. This blog helpes you to fix the cgroup problem on Fedora 31 with docker at the same time.

Run

With docker

Simple use the script `run_docker.sh` . If you're on Windows, just copy-paste the docker command line in the script to your terminal. Otherwise you can still run it whitout docker

Without docker
